

## **CORNER WAY-SIGN**

Just like the wall way-signs, the corner way-signs are used to provide an added information on the way between the information boards and the individual rooms. They are used if the information from the information board is not sufficient to come to the aim unambiguously.

From the wall way-signs they differ by the construction adapted to yield the information of further movement and direction, which is vertical to the wall or to its placement.

The corner way-sign consists of Aluminum profile carrier into which it is inserted an inscription of white clirit with the engraved and painted text.

On the way between information board and the aim usually one or more way-signs are placed as needed.

**dimension:** The way-sign dimension is 300 x 100 x 3 mm.

**color:** The color of milky white clirit with the text painted in black.

**material:** Aluminum profile carrier NEW HERMES (USA) and 3 mm thick milky white clirit.

**production technique:** Engraving with programmed CNC machine and painting of the engraved text.

**installation:** By two attachment screws. Depending on basis with wedges or on the wood or metal directly.

\* On special request a colored insertion - inscription of GRAVOPLY material may be manufactured in the desired color.
